

Clímaco Milla Miguel

Software Development Engineer

fduran@example.com | +34 748 873 248 | Zaragoza

PROFESSIONAL SUMMARY

Software Development Engineer with 7+ years building customer-facing systems. Comfortable across SQL (PostgreSQL, MySQL), pytest, Python (pandas, asyncio). Works well with product and design on ambiguous problems.

CORE COMPETENCIES

SQL (PostgreSQL, MySQL) - pytest - Python (pandas, asyncio) - container orchestration (Kubernetes) - containerisation (Docker) - Java - Git / GitHub

EDUCATION

B.Sc in Computer Science

BITS Pilani (2014 - 2017)

WORK EXPERIENCE

2024 to 2026

Software Development Engineer, TCS

- Raised unit test coverage on the claims module from 7% to 62% and wired it into the CI gate.
- Designed the claims data model in PostgreSQL and wrote the migration scripts for a 3M-row backfill.
- Containerised 8 legacy services with Docker and moved deployment to ECS.
- Reduced p95 API latency from 320ms to 110ms by adding an in-process LRU caching and rewriting the hottest query path.
- Migrated the inventory service from a monolith to 3 independently deployable services, cutting release time by 38%.

2021 to 2024

Software Development Engineer, Microsoft

- Raised unit test coverage on the notifications module from 24% to 54% and wired it into the CI gate.
- Implemented API-key authentication and role-based access control for the internal catalog tooling.
- Debugged and fixed a production incident affecting 3M users, then wrote the postmortem and added alerting.
- Reduced p95 API latency from 320ms to 80ms by adding an in-process LRU caching and rewriting the hottest query path.

2018 to 2021

Senior Software Engineer, Freshworks

- Implemented API-key authentication and role-based access control for the internal catalog tooling.
- Debugged and fixed a production incident affecting 220K users, then wrote the postmortem and added alerting.
- Raised unit test coverage on the logistics module from 28% to 28% and wired it into the CI gate.
- Built and maintained 10 Kotlin microservices handling 1.2M requests per day for the claims platform.
- Reduced p95 API latency from 900ms to 45ms by adding Redis caching and rewriting the hottest query path.

2017 to 2018

Backend Software Engineer, Google

- Built and maintained 9 Kotlin microservices handling 12K requests per day for the logistics platform.
- Implemented JWT-based authentication and role-based access control for the internal billing tooling.
- Containerised 15 legacy services with Docker and moved deployment to Jenkins.
- Designed the notifications data model in MongoDB and wrote the migration scripts for a 40K-row backfill.
- Migrated the notifications service from a monolith to 24 independently deployable services, cutting release time by 19%.

PERSONAL PROJECTS

E-commerce Order Backend

REST APIs over MySQL for cart, checkout and onboarding, deployed with Docker.

Distributed URL Shortener

A Python service with Memcached-backed counters, handling 150K redirects per day.

AWARDS

- Winner, search track at the national SQL hackathon.

CERTIFICATIONS

- Tableau Desktop Specialist
