🔗 LeetCode (200+ Question) ➤ GFG (100+ Question) 🌐 portfolio

Education

Jaypee Institute of Information Technology, Noida
Integrated B.Tech + M.Tech in Computer Science – CGPA: 7.4/10

2022 – 2027

Experience

Software Developer Intern
Distance Connect

Aug 2025 – Sept 2025

- Developed a responsive web interface to facilitate seamless connections between students and mentors.
- Integrated Gemini API to build an intelligent chatbot providing real-time guidance and support to users.
- Optimized frontend performance and UI/UX using React.js for better accessibility and user engagement.

Publications

Enhancing Network Intrusion Detection Using Conditional GANs for Imbalanced Data Classification
Published in *IEEE Xplore* 🔗

- Proposed a framework using Conditional GANs (cGAN) to generate synthetic data for minority attack classes, achieving a 99.8% accuracy on the NSL-KDD dataset.
- Integrated ensemble learning methods with synthetic data to improve model robustness and binary classification performance.
- Addressed class imbalance issues in NIDS to better identify both known and unknown cyber threats.

Projects

Thumblify: AI-Driven YouTube Thumbnail SaaS

[GitHub Link](#) 🔗

- Harnesses Gemini / Nano Banana API and Pollination AI to generate professional thumbnails from text descriptions in seconds and recreate old youtube thumbnails in seconds .
- Implemented a fair credit-based system (Basic: 5, Premium: 10 credits) with Razorpay integration for secure top-ups.
- Developed an image editor for real-time adjustments of brightness, contrast, color, and cropping.

DeepMood: Depression Prediction Using GANs

[Notebook Link](#) 🔗

- Developed DeepMood, a machine learning model that predicts depression using Generative Adversarial Networks (GANs).
- Trained the model on mental health datasets to generate realistic data distributions and enhance prediction accuracy.
- Improved feature representation by utilizing synthetic data to address data scarcity in clinical datasets.

NextTrip-Next Booking Opt

[Github Link](#) 🔗

- Engineered a MERN-stack booking platform with React, Node.js, and MongoDB.
- Implemented role-based authentication to secure admin and user access.
- Designed an admin dashboard for real-time tour management and booking analytics.

WalletWatcher: Expense Management Web App

[Live Link](#) 🔗

- Engineered a responsive MERN dashboard to visualize spending habits and manage personal budgets..
- Secured sensitive financial data using JWT-based authentication and industry-standard encryption.

Technical Skills

Languages: C, C++, JavaScript, Node.js, Python, HTML/CSS, Tailwind CSS, Reactjs
Developer Tools: Git, GitHub, VS Code, MongoDB, Firebase, Notion, Slack
Concepts: MERN Stack, Machine Learning, Data Structures & Algorithms

Achievements

- Member of the Student Placement Committee: Actively assisting in placement activities, coordinating with recruiters, and supporting students in their job search involvement.
- Smart India Hackathon 2023: Participated in SIH 2023, collaborating with a team to develop innovative solutions for real-world problems.
- Adobe Hackathon 2025: Built persona-driven PDF extraction tools.
